2 Test object Data

2.1 General EUT Description

Equipment under TestLARA-R204 LTE Data Module

Type Designation: LARA-R204
Kind of Device: LTE Data Module

LTE CAT

FCC ID: XPY1EIQN2NN IC Number: 8595A-1EIQN2NN

General product description:

The EUT is Cellular radio module supporting LTE bands eFDD4 and eFDD13.

2.2 EUT Main components

Type, S/N, Short Descriptions etc. used in this Test Report

| Short Description | Equipment | Type | Serial No. | HW Status | SW Status | |
|---|------------|-------------|-----------------|-----------|-----------|--|
| | under Test | Designation | | | | |
| EUT A (Code: | LTE Module | LARA-R204 | 357648070011198 | 266002 | 31.00 | |
| DE1015039F01) | | | | | | |
| Remark: EUT A is equipped with a temporary antenna connector. The Module is not sold with a | | | | | | |
| predefined antenna. | | | | | | |

NOTE: The short description is used to simplify the identification of the EUT in this test report.

2.3 Ancillary Equipment

For the purposes of this test report, ancillary equipment is defined as equipment which is used in conjunction with the EUT to provide operational and control features to the EUT. It is necessary to configure the system in a typical fashion, as a customer would normally use it. But nevertheless Ancillary Equipment can influence the test results.

| Short Description | Equipment under Test | Type Designation | HW Status | SW Status | Serial no. | FCC ID |

| AE 2 | Evaluation test board | EVB-WL3 | NO_EVK_CS _191A00 | - | - | - |

2.4 Auxiliary Equipment

For the purposes of this test report, auxiliary equipment is defined as equipment which is used temporarily to enable operational and control features especially used for the tests of the EUT which is not used during normal operation or equipment that is used during the tests in combination with the EUT but is not subject of this test report. It is necessary to configure the system in a typical fashion, as a customer would normally use it. But nevertheless Auxiliary Equipment can influence the test results.

3.1.1 Test Limits

For the 850MHz band, FCC §22.913 states that the maximum ERP of this device shall not exceed 7 Watts. IC SRSP-503 Issue 7, states that this device shall not exceed a maximum EIRP of 11.5 Watts For the purposes of this test report, the 7 Watt ERP limit stipulated in FCC §22.913 has been converted to an equivalent ERIP value of 11.5 Watts.

For all other limits, refer to the values stipulated in the corresponding tables.

3.3 RF Exposure Evaluation for multiple transmitters in co-location

| Standards |
|---|
| OET Bulletin 65 Edition 97-01 August 1997 |
| FCC 47 CFR §1.1307 |
| FCC 47 CFR §1.1310 |
| RSS-102 Issue 5 – March 2015 |

3.3.1 Co-Location Considerations

The calculation below is used to consider situations in which simultaneous exposure to fields of different frequencies occur. The calculation is performed by the sum of each relative exposure for each equipment according to the following criteria.

$$\sum_{1}^{N} \frac{S_{eqn}}{S_{Limn}} = \frac{S_{eq1}}{S_{Lim1}} + \frac{S_{eq2}}{S_{Lim2}} + \dots + \frac{S_{eqN}}{S_{LimN}} \le 1$$

Where:

 S_{eq} is the power density of the electromagnetic field at a given distance by a specific transmitter and a defined frequency.

S_{lin} is the MPE limit for the frequency being evaluated.

3.3.2 Assumptions

- 1. Primary transmitter does not support power reduction for multiple time slots on the uplink.
- 2. Antenna separation from module to human body is \geq 20cm.
- 3. Separation distance between co-located transmitting antennas is 0cm.
- 4. Hypothetical Bluetooth radio is assumed to have an output power of 9.5dBm and an antenna gain of 4dBi.
- 5. Hypothetical WLAN radio is assumed to have an output power of 19dBm and an antenna gain of 5dBi.

3.3.3 Test Protocol

The below table is to determine the MPE values using the maximum gain values obtained in section 3.3.4 of this document.
